Definitions for csv fields download from Citation Retrieval System (CRS)

Search Result Number	Sequential number of citation retrieved.Not a part of permanent citation record. Csv output lists citations alphabetically by Author.
feisid	Unique identifying number assigned by CRS to each citation entered into the system
author	Author(s) of reference. Entered into CRS and displayed here according to RMRS stylesheet: last name, first name, with semicolons separating multiple authors.
year	Year of publication
title	Complete title of reference
source	Information that identifies everything in citation OTHER THAN Author,Year, and Title. Subfields are identified with {}. Note that subfields are combined and reprinted according to RMRS stylesheet in last column (formattedSource).
keywords	Keywords for use as search terms to locate references. Keywords are separated by commas. Because CRS searches this field based on "contains" logic rather than "equals" logic, some keywords are too ambiguous to use effectively without comma delimiters. For example: search on "MT" vs. ",MT,". To find definitions of CRS keywords, open the "Search" function on the CRS homepage and go to the bottom where you'll find "Keyword Search".
ednotes	Information entered and used by CRS staff
type	In general, Type indicates the kind of citation (thesis, journal article, etc.). However, not ALL journal articles are coded for this type because some types (e.g., free form) can be used to record many kinds of citations. "Type" is used in CRS to decode the Source field into the "formattedSource" field. Reference types used in CRS are: 　　Be: Book, Series, or Monograph, Entire 　　Bc: Book, Series, or Monograph, Chapter or Section 　　Cd: CD-ROM or Online Database 　　De: Dissertation, Entire 　　Dj: Dissertation, published in a Journal 　　Ff: Free Form 　　Ja: Journal or Periodical Article 　　Ji: Journal or Periodical, Entire Issue 　　Mp: Map 　　Nb: Newspaper Byline 　　Np: Newspaper, No Byline 　　Pa: Proceedings Article 　　Paj: Proceedings Article, published in a Journal 　　Pas: Proceedings Article, published in a Numbered Series 　　Pe: Proceedings, Entire 　　Pej: Proceedings, Entire, published in a Journal 　　Pes: Proceedings, Entire, published in a Numbered Series 　　Re: Report (not a book or monograph) 　　Se: Series, Entire 　　Sc: Series, Chapter or Section 　　Up: Unpublished Paper 　　Vc: Verbal Communication 　　Wb: Web Site 　　Wc: Personal Communication
call	Physical location in Fire Effects Library at Missoula Fire Sciences Laboratory. In general, "F" indicates file cabinets; "B" indicates bookshelves, and "D" indicates the document is not in the Library. Locations are as follows: 　　F: file cabinets, filed alphabetically by author 　　　F(D): Fire Effects Library has only part of document on file 　　　F(pers. comm.)

	B: bookshelves
	    B(bib): Bibliography
	    B(CD/microfiche)
	    B(desert)
	    B(field guides)
	    B(fire)
	    B(flora)
	    B(forestry/mgmt)
	    B(glossary)
	    B(hts): habitat type and vegetation community descriptions
	    B(misc)
	    B(no longer used)
	    B(oversize)
	    B(pers.comm.)
	    B(prairie/grass)
	    B(range)
	    B(rehab)
	    B(riparian/wet)
	    B(scanned): Filed electronically. Hard copy may not be available.
	    B(shrubs)
	    B(soil)
	    B(spp/genus)
	    B(thesis): Theses and dissertations
	    B(trees)
	    B(weeds)
	    B(wildlife)
	D: "Don't have", ie, not in Fire Effects Library
	    D(MANS): Available from University of Montana Mansfield Library
	    D(MONTU): Available from University of Montana Herbarium
	    D(NAL): Available from National Agricultural Library
	FEIS: Online in Fire Effects Information System

edBy	CRS staff person who last changed the citation
edAt	Date and time of last change in citation

status	Nature of citation entry, whether completed or not. Statuses are:
	    Published
	    Checked
	    On Order (not yet available through Visitor search)
	    Editing (not yet available through Visitor search)
	    On Hold (not yet available through Visitor search)

formattedSource	All information that follows Author, Year, and Title, taken from Source field and formatted for output according to RMRS stylesheet.
